

Popes Hill – REE

Contact: **Stephen Stockley**,
stockleysteve@hotmail.com

Drill Hole Locations

Property Highlights:

- Fifteen samples gave P2O5 values >2% with a high of 11.6%.
- Preliminary studies show that REE mineralization, with higher REE content is present in apatite (calcium phosphate) and apatite content should be reflected by P2O5 values.
- Data from three Sentinel-2 Satellites was analyzed by Dr. Neil Pendock to assess Popes Hill mineralization (full findings are available) and the property is found to be very prospective.
- Core logging and drone analysis in partnership with the College of the North Atlantic are planned for spring 2023.

- Potential for Major Deposit:
- ★ The Popes Hill property comprises close to 1,900 acres (800 hectares).
 - ★ Major Commodity: REE
 - ★ Secondary: Yttrium, Thorium
 - ★ Ore Minerals: Allanite, Apatite
