

# Lynx Lake – Ni-Cu-Co-V

- The property is 145 kms from Goose Bay and on the Trans Labrador Highway, paved right to the property
- Three Phase Power line from Muskrat Falls on the property
- Kings Bay did not drill where there was known mineralization and EM Anomalies at the West Pit & East Pit.
- Results in the drill core had minor sulphides.
- Vtem anomalies are directly below the pits which would suggest a high concentration of high-grade sulphides below
- Property needs diamond drilling to see what is below in these anomalies.
